

FLUSH-FACE DIAPHRAGM SEAL

FEATURES

- Manufactured in 316 stainless steel

APPLICATION

- Protects process equipment from contamination by dirty/viscous fluids

SPECIFICATION

Instrument connection : $\frac{1}{4}$ " BSP female thread

Process connection : $\frac{1}{2}$ " BSP male thread

Temperature limit : -40°C - +150°C

Material : Body 316 stainless steel

Membrane 316 stainless steel

INTRODUCTION

A diaphragm seal is a flexible membrane that seals and isolates an enclosure. The flexible nature of the seal allows pressure effects to cross the barrier, but not the material being contained. These are typically used in conjunction with the Kelco E30 Pressure Guard in effluent applications.

This device should be ordered with the control equipment as it requires specialized liquid filling at the time it is fitted.
